

Hello, welcome to an exploration webpage of the uncanny valley. Originally discovered by Japanese roboticist Masahiro Mori (Katayama, www.wired.com), the uncanny valley is a phenomenon that causes a confusing fear among humans. This topic is significant in the theme of monsters and Misfits because there is something monstrous about what the uncanny valley is and how we innately fear it. I chose my topic out of personal interest, and I think that others will find it interesting as well. *The uncanny valley is the future of human fear.*
